## INTRODUCTION

Nuclear Power Reactors in the World is an annual publication that presents the most recent data pertaining to nuclear power reactor units in IAEA Member States.

This forty-second edition of Reference Data Series No. 2 (RDS-2) provides a detailed comparison of various statistics up to and including 31 December 2021. The tables and figures contain the following information:

- General statistics on nuclear reactors in IAEA Member States;
- Technical data on specific reactors that are either planned, under construction or operational, or that have been shut down or decommissioned;
- Performance data on reactors operating in IAEA Member States, as reported to the IAEA.

The data compiled in this publication are a product of the IAEA's Power Reactor Information System (PRIS). The PRIS database is a comprehensive source of data on all nuclear power reactors in the world. It includes specification and performance history data on operational reactors as well as reactors under construction or in the decommissioning process. Data are collected by the IAEA via officially nominated national liaison officers and data providers in Member States. The IAEA appreciates the valuable assistance of the national authorities, official correspondents and various utilities in gathering the information for this report.

As of 31 December 2021, there were 437 operational nuclear power reactors worldwide, with a total capacity of 389.5. GW(e). Overall, nuclear power capacity has shown a gradual growth trend over the past decade, including some 20.7 GW(e) of new capacity added by the connection of new units to the grid or upgrades to existing reactors.

In 2021, while the total global capacity decreased by some 3 GW(e) compared with 2020, the electricity generation increased by 4 percent. During the year, 447 operational power reactors generated electricity and contributed to the 2021 data results and statistics.

In 2021, six new reactors were connected to the grid, resulting in an additional 5.2 GW(e) of nuclear power capacity. All new nuclear power capacity was added in Asia, including three reactors in China at Tianwan-6 (PWR, 1000 MW(e)), Hongyanhe-5 (PWR, 1061 MW(e)), and Shidao Bay-1, a high-temperature reactor pebble-bed module (HTR-PM), part of a new generation of modular high-temperature gas-cooled reactors (HTGRs), with a total capacity of 200 MW(e). In India, Kakrapar-3 (PHWR, 630 MW(e)) was connected in January, followed by Pakistan's Kanupp-2 (PWR, 1017 MW(e)) in March and Barakah-2 (PWR, 1310 MW(e)) in the United Arab Emirates, which was connected to the grid in September 2021.

As of 31 December 2021, 56 reactors were under construction in 19 countries with a total of capacity of 58.1 GW(e). Installed nuclear power capacity under construction has remained largely steady in recent years, except for continuous growth in Asia, where a total of 63.6 GW(e) operational capacity (70 reactors) has been connected to the grid since 2005. In 2021, the construction of six new PWR reactor units began in China at Changjiang-3 (1000 MW(e)), Changjiang-4 (1000 MW(e)), Linglong-1 (100 MW(e)), Sanaocun-2 (1117 MW(e)), Tianwan-7 (1171 MW(e)) and Xudabu-3 (1200 MW(e)). Two PWR reactors, Kudankulam-5 and Kudankulam-6, each with 917 MW(e) capacity, began construction in India. In March, the Republic of Türkiye started construction of a third unit (1114 MW(e)) at the Akkuyu-3 site, located in Mersin province on Türkiye's Mediterranean coast. In June, Russia began construction of a lead-cooled fast neutron reactor, Brest-OD-300 (300 MW(e)).

Ten reactors with a total capacity of 8.7 GW(e) were permanently shut down globally. Some 65% of the capacity loss resulting from permanent shutdowns came from three reactors in Germany: Brokdorf (PWR, (1410 MW(e)), Grohnde (PWR 1360 MW(e)), Gundremmingen-C (BWR, 1288 MW(e))), and three reactors in the United Kingdom: Dungeness gas-cooled reactor (GCR) units B-1 and B-2, each unit with a capacity of 545 MW(e), and Hunterston B-1 (GCR, 490 MW(e)). Pakistan's first ever nuclear power reactor Kanupp-1 (PHWR, 985 MW(e)), which was connected to the grid over 50 years ago, was retired in August. After 45 years of operations, Kursk-1 (LWGR, 925 MW(e)) reactor in Russia shut down in December, followed by Kuosheng-1 (BWR, 985 MW(e)) in Taiwan, China, at the end of the year.

Information and data received by the IAEA through 31 May 2022 are included in this publication, with all commercially operating units reporting data up to this date. Any modifications received at a later date, although not included in this publication, are available in the PRIS database.

PRIS statistics are available in the IAEA's annual publications such as "Operating Experience with Nuclear Power Stations in Member States" and "Country Nuclear Power Profiles", as well as on the PRIS web page (<http://www.iaea.org/pris>). Detailed nuclear power reactor data and reports are accessible to registered users through PRIS Statistics on-line application. Enquiries should be addressed to:

## DEFINITIONS

### Performance factors

$$\text{EAF (\%)} = \frac{(\text{REG} - \text{PEL} - \text{UEL} - \text{XEL})}{\text{REG}} \times 100$$

$$\text{UCF (\%)} = \frac{(\text{REG} - \text{PEL} - \text{UEL})}{\text{REG}} \times 100$$

$$\text{UCL (\%)} = \frac{\text{UEL}}{\text{REG}} \times 100$$

$$\text{PCL (\%)} = \frac{\text{PEL}}{\text{REG}} \times 100$$

$$\text{LF (\%)} = \frac{\text{EG}}{\text{REG}} \times 100$$

$$\text{OF (\%)} = \frac{\text{On-line hours}}{\text{Total hours}} \times 100$$

where

EAF is the energy availability factor, expressed in per cent;

UCF is the unit capability factor, expressed in per cent;

UCL is the unplanned capability loss factor, expressed in per cent;

PCL is the planned capability loss factor, expressed in per cent;

LF is the load factor, expressed in per cent; and

OF is the operating factor, expressed in per cent.

REG Reference energy generation: The net electrical energy ( $\text{MW}\cdot\text{h}$ ), supplied by a unit continuously operated at the reference unit power for the duration of the entire reference period.

|     |  |
|-----|--|
| PEL | Planned energy loss: The energy (MW·h) that was not supplied during the period because of planned shutdowns or load reductions due to causes under plant management control. Energy losses are considered to be planned if they are scheduled at least four weeks in advance.                              |
| UEL | Unplanned energy loss: The energy (MW·h) that was not supplied during the period because of unplanned shutdowns, outage extensions or load reductions due to causes under plant management control. Energy losses are considered to be unplanned if they are not scheduled at least four weeks in advance. |
| XEL | External energy loss: The energy (MW·h) that was not supplied owing to constraints beyond plant management control that reduced plant availability.  |
| EG  | Electrical energy: The net electrical energy supplied during the reference period as measured at the unit outlet terminals after deducting the electrical energy taken by unit auxiliaries and the losses in transformers that are considered to be integral parts of the unit.                            |

### **Planned reactors**

The IAEA considers a reactor as planned from the date when a construction licence application has been submitted to the relevant national regulatory authorities to the construction start date.

### **Construction start**

The date when the first major placing of concrete, usually for the base mat of the reactor building, is carried out.

### **First criticality**

The date when the reactor is made critical for the first time.

### **Grid connection**

The date when the plant is first connected to the electrical grid for the supply of power. After this date, the plant is considered as operational.

### **Commercial operation**

The date when the plant is handed over by the contractors to the owner and declared officially in commercial operation.

### **Long term shutdown (suspended operation)**

A unit is considered to be in long term shutdown if it has been shut down for an extended period (usually several years) initially without any firm recovery schedule, but with the intention to restart the unit eventually. Suspended operation is a new term for this status.

### **Permanent shutdown**

The date when the plant is officially declared to be shut down by the owner and taken out of operation permanently.

### **NSSS supplier**

The supplier of a power reactor unit's nuclear steam supply system.

### **Units and energy conversion**

1 terawatt-hour (TW·h) =  $10^6$  megawatt-hours (MW·h)

For an average power plant:

|        |   |   |
|--------|---|---|
| 1 TW·h | = | 0.39 megatonnes of coal equivalent (input); |
|        | = | 0.23 megatonnes of oil equivalent (input).  |

## Notes:

The total includes the following data from Taiwan, China:

- 3 units, 2859 MW(e) in operation;
- 26.8 TWh of nuclear electricity generation, representing 10.8% of the total electricity generated there.

Notes:

1. The total includes the following data from Taiwan, China:

— operational reactors, 3 units, 2859 MW(e); permanently shutdown reactors, 3 units, 2193 MW(e); 236 years, 8 months.

2. Operating experience is counted from the grid connection excluding any long term shutdown period.

**TABLE 5. OPERATIONAL REACTORS AND NET ELECTRICAL POWER (1990-2021)**

## TABLE 17. REACTORS IN DECOMMISSIONING PROCESS OR DECOMMISSIONED, 31 DEC. 2021 — continued

Table 17: Definitions for reactors in decommissioning process or decommissioned

| Shutdown reason | Description  | Decom. strategy      | Description   |
|-----------------|--|----------------------|---|
| 1               | The technology or process being used became obsolete   | ID                   | Immediate dismantling and removal of all radioactive materials  |
| 2               | The process was no longer profitable   | Dd+SE                | Deferred dismantling, placing all radiological areas into safe enclosure  |
| 3               | Changes in licensing requirements  | Dd+PD+SE             | Deferred dismantling, including partial dismantling and placing remaining radiological areas into safe enclosure                      |
| 4               | After an operating incident  | ISD                  | In situ disposal, involving encapsulation of radioactive materials and subsequent restriction of access                               |
| 5               | Other technological reasons (please mention them below)  | Other                | None of the above   |
| 6               | Other economical reasons (please mention them below)   |                      |   |
| 7               | Public acceptance or political reasons   |                      |   |
| 8               | After major component failure or deterioration   |                      |   |
| 9               | Licence terminated - legal act at the end of the decommissioning process (and site released for restricted/unrestricted use) |                      |   |
| 10              | None of the above  |                      |   |
| Fuel Management | Description  | Current decom. phase | Description   |
| 1               | Transfer to a reactor facility   | 1                    | Drawing up the Final Decommissioning Plan   |
| 2               | Transfer away from a reactor facility  | 2                    | Reactor core defuelling (See also Fuel Management)  |
| 3               | Storage in an on-site facility   | 3                    | Waste conditioning on-site - only for decommissioning waste   |
| 4               | Storage in an off-site facility  | 4                    | Waste shipment off-site - only for decommissioning waste  |
| 5               | Shipment to a reprocessing plant   | 5                    | Safe enclosure preparation  |
| 6               | Underwater storage period  | 6                    | Partial dismantling   |
| 7               | Dry storage period   | 7                    | Active safe enclosure period  |
| 8               | Encapsulation  | 8                    | Passive safe enclosure period   |
| 9               | Transfer for storage in away from reactor facility (AFR-RS) on reactor site - Wet Storage Technology                         | 9                    | Final dismantling   |
| 10              | Transfer for storage in away from reactor facility (AFR-OS), off reactor site - Wet Storage Technology                       | 10                   | Final survey  |
|                 |  | 11                   | Licence terminated - legal act at the end of the decommissioning process (and site released for restricted/unrestricted use)          |
|                 |  | 12                   | Transition phase following permanent shutdown, including reactor core defuelling (See also Fuel Management) and strategy, preparation |
|                 |  | 13                   | Preparation for dismantling of major equipment and buildings  |
|                 |  | 14                   | Safe enclosure period   |
|                 |  | 15                   | Demolition (if disconnected from nuclear dismantling / conventional demolition)   |

**TABLE 18. PERFORMANCE FACTORS BY REACTOR CATEGORY (2019-2021)**

| Reactor Category | Number of Units | Availability Factor (EAf) % | Reactors reporting to IAEA PRIS (see note) |                         |                          |                         | Load Factor (LF) % |
|------------------|-----------------|-----------------------------|--|-------------------------|--------------------------|-------------------------|--------------------|
|                  |                 |                             | Planned Cap-Loss Factor (PCL) %            | Capacity Factor (UCF) % | Forced Loss Rate (FLR) % | Operating Factor (OF) % |                    |

Note:

1. Reactors shut down during 2019 to 2021 (28 units) are considered.
2. Nuclear power operating statistics do not include outage data from French reactor units as information for these units was not available by the time of publication.

**TABLE 19. FULL OUTAGE STATISTICS DURING 2021**

| Reactor Type        | Number of Units | Full Outage Hours per Operating Experience Year | % Planned Outages | % Unplanned Outages | % External Outages |
|---------------------|-----------------|---|-------------------|---------------------|--------------------|
| PWR                 | 305             |   | 1552              | 77.2                | 16.8               |

Notes

1. Only reactors which have achieved full commercial operation in or before 2021 are counted.
2. Nuclear power operating statistics do not include outage data from French reactor units as information for these units was not available by the time of publication.

## ORDERING LOCALLY

IAEA priced publications may be purchased from the sources listed below or from major local booksellers.

Orders for unpriced publications should be made directly to the IAEA. The contact details are given at the end of this list.

### NORTH AMERICA

***Bernan / Rowman & Littlefield***

15250 NBN Way, Blue Ridge Summit, PA 17214, USA

Telephone: +1 800 462 6420 • Fax: +1 800 338 4550

Email: [orders@rowman.com](mailto:orders@rowman.com) • Web site: [www.rowman.com/bernan](http://www.rowman.com/bernan)

### REST OF WORLD

Please contact your preferred local supplier, or our lead distributor:

***Eurospan Group***

Gray's Inn House

127 Clerkenwell Road

London EC1R 5DB

United Kingdom

***Trade orders and enquiries:***

Telephone: +44 (0)176 760 4972 • Fax: +44 (0)176 760 1640

Email: [eurospan@turpin-distribution.com](mailto:eurospan@turpin-distribution.com)

***Individual orders:***

[www.eurospanbookstore.com/iaea](http://www.eurospanbookstore.com/iaea)

***For further information:***

Telephone: +44 (0)207 240 0856 • Fax: +44 (0)207 379 0609

Email: [info@europangroup.com](mailto:info@europangroup.com) • Web site: [www.europangroup.com](http://www.europangroup.com)

### Orders for both priced and unpriced publications may be addressed directly to:

Marketing and Sales Unit

International Atomic Energy Agency

Vienna International Centre, PO Box 100, 1400 Vienna, Austria

Telephone: +43 1 2600 22529 or 22530 • Fax: +43 1 26007 22529
