[Data in metric tons, rare-earth-oxide (REO) equivalent, unless otherwise specified]

Domestic Production and Use: Rare earths were mined and processed domestically in 2024. An estimated 45,000 tons of REO in mineral concentrates were produced and were valued at \$260 million. Bastnaesite (or bastnäsite), a rare-earth fluorocarbonate mineral, was mined as a primary product at a mine in Mountain Pass, CA. Monazite, a phosphate mineral, was stockpiled as a separated concentrate or included as an accessory mineral in heavy-mineral-sand concentrates in the southeastern United States. Mixed rare-earth compounds also were produced in the Western United States. The estimated value of rare-earth compounds and metals imported by the United States in 2024 was \$170 million, an 11% decrease from \$186 million in 2023. The estimated leading domestic end use of rare earths was catalysts. Significant amounts of rare earths are imported as permanent magnets embedded in finished goods. Other end uses were ceramics and glass, metallurgical applications and alloys, and polishing.

<u>Recycling</u>: Limited quantities of rare earths were recovered from batteries, permanent magnets, and fluorescent lamps.

Import Sources (2020–23): Rare-earth compounds and metals: China,⁹ 70%; Malaysia, 13%; Japan, 6%; Estonia, 5%; and other, 6%. Compounds and metals imported from Estonia, Japan, and Malaysia were derived from mineral concentrates and chemical intermediates produced in Australia, China, and elsewhere.

| <u>Tariff</u> : Item | Number | Normal Trade Relations <u>12–31–24</u> |
|---|--------------|---|
| Rare-earth metals | 2805.30.0000 | 5% ad valorem. |
| Cerium compounds | 2846.10.0000 | 5.5% ad valorem. |
| Other rare-earth compounds: | | |
| Oxides or chlorides | 2846.90.2000 | Free. |
| Carbonates | 2846.90.8000 | 3.7% ad valorem. |
| Ferrocerium and other pyrophoric alloys | 3606.90.3000 | 5.9% ad valorem. |

Depletion Allowance: Monazite, 22% on thorium content and 14% on rare-earth content (domestic), 14% (foreign); bastnaesite and xenotime, 14% (domestic and foreign).

RARE EARTHS

<u>Government Stockpile</u>:¹⁰ In the addition to the materials listed below, the fiscal year (FY) 2024 and 2025 potential acquisitions included varying amounts of neodymium-praseodymium oxide, neodymium-iron-boron magnet block, and samarium-cobalt alloy.

| | FY 2024 | | FY 20 | 25 |
|-----------|---------------------------|-------------------------------|---------------------------|------------------------|
| Material | Potential acquisitions | Potential <u>disposals</u> | Potential acquisitions | Potential disposals |
| Cerium | 550 | | | |
| Lanthanum | 1,300 | — | 1,100 | — |

Events, Trends, and Issues: Global mine production was estimated to have increased to 390,000 tons of REO equivalent largely owing to increased mining and processing in China, Nigeria, and Thailand.

<u>World Mine Production and Reserves</u>: Reserves for Russia, South Africa, the United States, and Vietnam were revised based on company and Government reports.

| | Mine production ^e | | Reserves ¹¹ |

<u>World Resources</u>:¹⁰ Rare earths are relatively abundant in the Earth's crust, but minable concentrations are less common than for most other mineral commodities. In North America, measured and indicated resources of rare earths were estimated to include 3.6 million tons in the United States and more than 14 million tons in Canada.

Substitutes: Substitutes are available for many applications but generally are less effective.

^eEstimated. E Net exporter. NA Not available. — Zero.

¹Data include lanthanides and yttrium but exclude most scandium. See also the Scandium and Yttrium chapters.

²Excludes monazite concentrates for 2021–24.

³In 2023 and 2024, reported production includes that for praseodymium and neodymium compounds in California and rare-earth compounds in Utah. Other rare-earth compounds were produced in California, but data were not in the reported totals shown. Total domestic production in 2023 and 2024 was 1,920 tons and 7,600 tons, respectively.

⁴REO equivalent or content of various materials were estimated. Source: U.S. Census Bureau.

⁵Defined as production + imports – exports.

⁶Source: Argus Media Group, Argus Non-Ferrous Markets.

⁷Defined as imports – exports.

⁸In 2020, all domestic production of mineral concentrates was exported or held in inventory, and all compounds and metals consumed were assumed to be imported material.

⁹Includes Hong Kong.

¹⁰Gross weight. See Appendix B for definitions.

¹¹See Appendix C for resource and reserve definitions and information concerning data sources.

¹²Estimated based on reported import data for China. Source: Zen Innovations, Global Trade Tracker.

¹³For Australia, Joint Ore Reserves Committee-compliant or equivalent reserves were 3.3 million tons.

¹⁴Production quota; does not include undocumented production.
